

POS Application Development for Restaurant and Food Delivery

Client: The client is the owner of a well-known restaurant in the USA, which is famous for its Taco Pizza.

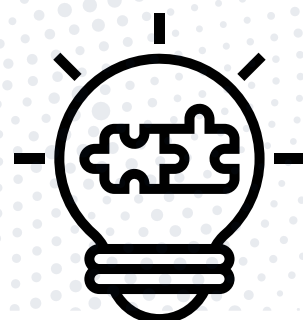

Business Challenge:

Since their business has accelerated growth with various locations in the USA, they needed their system to manage the menu according to the timings, Customization of the menu items, pricing, tax, bills, payment, and more. Moreover, the client needed a way to reward the customers through the system.

Solution Delivered:

After analyzing their complete requirements, we had several brainstorming sessions to provide a clear product that perfectly should match the client's business requirements. We are focused on bringing increased revenue and an effective way of marketing with the developed POS application. The client was happy starting his journey with us, which makes us very interested in working for them. The client chose to develop a new POS system. With new functionalities and features, we delivered the POS application that exactly met the business needs.

Business Benefits:

With the newly developed POS application for Taco Pizza Point, the client was able to achieve:

-  Easy database management.
 -  Customization of menu items.
