CG-VAK
SOFTWARE & EXPORTS LTD.

Web/ Mobile App Development for Doctors and Patient Management

Client: The client is a recognized specialist with a clinic in the USA.

Business Challenge:

Since the client is handling medications for all ages, they would like to have a mobile application for patients and a web application for doctors to satisfy the following requirements:

· Functionalities for communication b/w doctor and patient
· Tracking issues with symptoms.
· Health indicators with various parameters
· Queries and help within a single app
· Buying medicines from the nearest store

Solution Delivered:

After analyzing the requirements of the client, our experts gathered a plan for developing an application for both sides. It's all started with a discussion using our roadmap and our client was satisfied with a clear understanding of what CG-VAK going to help them with our web/ mobile app development services. We helped build modules for a quick start of the application. Also, the integration of tracking patients' heath on daily basis made the client happy. Moreover, we had an opportunity to face critical stages of developing and launching this application gave us a deep experience in this firm.

Business Benefits:

With our web/ mobile app development, the client and their patients can achieve:

User(patient) side:

- ·Quick start of the application
- ·Tracking health daily
- ·Storing the data of health values for long term
- ·Able to connect with doctors through video calls
- ·Book an Appointment through the mobile app
- ·Secured Payment gateway
- ·Indirect communication through queries
- ·Buy medicines from the nearest store
- ·Health tips and information based on the patient's issue through pop-ups.
- ·Easy navigation into the app

Doctor Side:

- ·Functionalities for easy patient health tracking
- ·Indicators for monitoring
- ·Easy management of patient data
- ·Make answers to patients through video calls and messages
- ·Fast diagnosing of patient's illness
- ·Consultation for patients who are at long distances.

Technologies Used:

NodeJS

PostgreSQL

Express JS

JavaScript

Ionic
