

Web application for Logistics Management System

Client: The client is a reputed Multinational Logistics company in the USA.

Business Challenge:

The existing legacy Logistics Management System application is manually optimized by collecting data manually and also it lacks integration with shipping and tracking of information. Optimization of route difficulty and timely delivery to the destination point was the major challenge faced by them. Their requirements are:

- App seamless workflow experience
- Inventory management
- Automate functions
- Shipping and tracking information
- Live Tracking of shipping with route
- Synchronization of the information with the airport, port, path, etc.

Solution Delivered:

After a complete analysis of the business challenges they faced and the requirements, we came up with developing a logistics management system application with a smooth workflow to serve best to the customers. The application is also integrated with the GPS and Google Geo-locations API to track the shipment in real-time. It was made with an inventory management system and accurate shipping, tracking information with the live route. Thus, our application made the client manage easily with Transportation and logistics management.

Business Benefits:

With our logistics management system application, we were able to achieve what the client asked for:

-  Inventory Management
-  Warehouse Management
-  Shipping and Tracking Details
-  Live route enabled for easy tracking
-  Shipment Status Alerts and Updates
-  Flexibility
-  Easy optimization
-  Timely delivery to the destination point
-  Automated functionalities
-  Transparency in all reports
-  GPS Enabled

Technologies Used:

- Laravel
- PHP
- Angular
- Geo-Locations API
- MySQL
- HTML5
- CSS

As a leading outsourced product development company, we make outsourcing successful for our clients. With extensive knowledge and deep expertise in software product development, we help our clients to manage their business in a streamlined process. Our Outsourcing firm started at 1995 and successfully implemented Various IT services. Our comprehensive range of services includes custom software development, web app, mobile app development, eCommerce, digital marketing solutions, IMS services to our clients. To know more about our services, visit our website

Now accelerate your business process with CG-VAK and get into a competitive edge with our various application development services.
